

Apr 16 Team Meeting — Summary & Action Items

Context: Post-mortem on the Apr 15 trainer meeting with Callie/Andres/Ayo/Smitha + proposal refinement. Callie left for second half. Final presentation is **May 11**.

Key Discussion Points

Data-collection gap (Avery)

- CNIB has no in-class video recordings; only Zoom-generated summaries of audio
- Proposal: capture in-class transcripts (instructor + participants) as an easy-to-collect signal
- Three natural extensions:
 1. Link questions → participants (**Ayo said ~90% of students ask questions** — huge untapped signal)
 2. Better auto-summarization (**Andres said Zoom summary quality is poor**)
 3. Frustration / confusion detection from tone and non-verbal signals beyond raw words

Ryan's framing

- Zoom already supports per-participant speaker attribution — instructor + student A / B / C
- Don't tunnel-vision on one data source; combine transcripts + homework + assignment + exam signals
- Be pragmatic given the ~3-week timeline; higher-level correlations (struggling + in-class questions + grades) may be sufficient

Tanay + Anandita demo — rejected on privacy grounds

- Showed cnibhn.exe-style accessibility-API monitor logging Excel / PowerPoint / Word activity (cell navigation, stuck states, app switching, 10-second activity buffers)
- **Rejected** by Ryan, Callie, and Avery — invasive on student desktops, CNIB would likely ban it
- Office-add-in fallback has the same concern (users may have sensitive content open in Word)
- Workable only in a sandbox / VM environment — not realistic for demo deadline

Existing data inventory (Callie)

SOURCE	STATUS
Zoom summaries (with next-steps highlights)	Team has access
Zoom raw transcripts	Available after name redaction
Surveys	Team already has
Workbooks — new this past academy, with activities + reflection questions	Not yet shared with team
Salesforce campaign attendance per session	Available

Anandita's survey findings

- ~70% say labs are most effective
- ~50% report not feeling confident
- Clear **skill-level mismatch** signal — learners want cohorts divided by level
- Requests for per-system tip sheets (Mac vs. Windows)
- One-on-one support highly valued across the board
- ~60% survey participation rate
- Avery's ask: layer in explicit quantitative correlations (e.g. "40% of respondents reported skill mismatch", cross-column correlations between lab preference and 1:1 support preference)

Deliverable format (Ryan)

- Integrate into final presentation with a three-part arc: **current state** → **future state** → **best state** (best state = the granular-data vision)
- Homework isn't currently monitored → possible add-on signal

Terminology clarification

- **Labs / Homework (= Workbook) / Lectures** — the three components
- No separate "Assignments" category (Aryan's slip); homework and assignment are interchangeable in CNIB's vocabulary

Action Items

#	OWNER	ACTION	DUE
1	Ryan + Avery	Provide proposal template (format students should use)	2026-04-19 / -20
2	Students (Aryan, Tanay, Anandita, Aina, Shreeya)	Submit one-liner proposals explicitly answering: difficulty tier + existing-vs-new data	Mon 2026-04-20
3	Ryan + Avery	Review proposals, consolidate into a single direction	By Thu 2026-04-23
4	Team	Find open-source classroom audio / transcript dataset for mock data	open
5	Anandita	Communicate Monday deadline to Shreeya	2026-04-20
6	Team	Prepare 10–15 min demo for Callie ~2 weeks out	~May 1–2
7	Callie	Share workbooks with team	open
8	Callie (optional)	Share redacted Zoom transcripts	open
9	Team	Pick collaboration platform that works with Aina (Overleaf or SharePoint — Google Docs blocked by her workspace)	2026-04-19
10	Aryan + Avery	Offer LaTeX mini-workshop if Overleaf is chosen	as needed

Meeting Cadence Change

- **Callie will skip weekly Thursdays** until the demo review (~2 weeks out)
- Weekly Thursday meetings continue between students + Ryan + Avery
- Invite Callie back explicitly for the ~May 1–2 demo session

Exam Conflicts Flagged

- **Anandita:** 4 exams in next 10 days — reduced capacity
- **Aina:** next exam Apr 28 — has breathing room until then
- Others: lighter load, full availability

Notes on the Proposal

When writing your one-liner, Avery asked everyone to answer **two questions explicitly**:

1. **Difficulty tier** — is this Tier 1 (easiest, uses existing data), Tier 2 (moderate, light new collection), or Tier 3 (hardest, full granular collection)?
2. **Data source** — existing CNIB data only, or does this require new collection?

Keep the one-liner short. Iteration comes through comments on the living document, not through rewriting from scratch.
